## **Sprint 04 Planning Meeting**

### **Part One: What will be done this Sprint?**

This sprint will mainly focus around implementing tests for the existing code. A few settings options will be added so that if we don't have time to complete everything we have set out for, we won't have an empty activity with no functionality. The created chat rooms should be shown to all the users and a message should only be shown in the room where the user wrote it. We will try to change the database from derby to sqllite and see if that works better.

### **Part Two: How will the chosen work be done?**

We will try the new database first before beginning to fix the issues with the chat rooms. While the new database is tested other people will write tests and adding some settings. As soon as the database is finished, we will start working on the chat rooms because the chat rooms is more important than the settings.
