

User Manual

ShutApp is a location based chat application. The idea is that the user should be able to chat with anyone that is within close distance to him/her.

When the application is first started the first screen you will see is where you will chose your chat name.

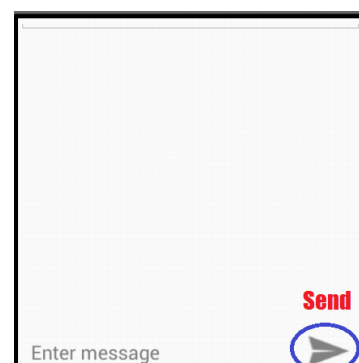

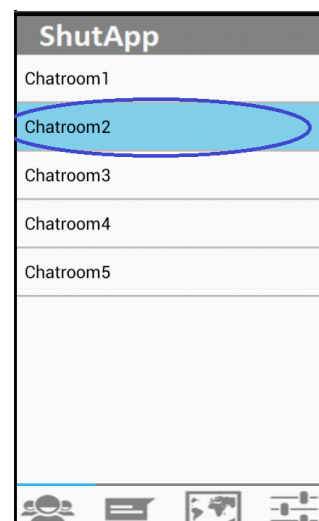

When a name has been entered and approved you will be shown a list of the current chat rooms you are able to join.

There is a navigation bar located at the bottom of the screen.

you want to enter a room,

simply click on the link

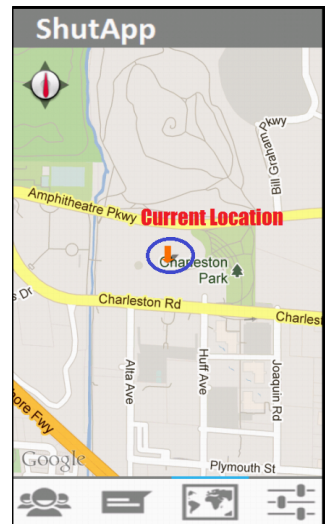

Write a message and press the send button and the message will be shown for everyone in the chat room

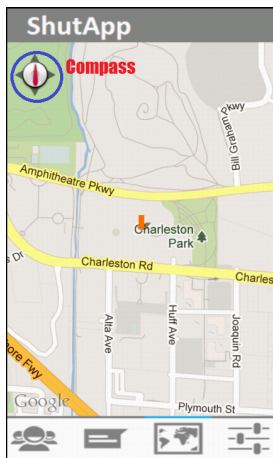

If you press the settings button (in the lower right corner of the screen) you will have some options on how you want the application to look and behave.

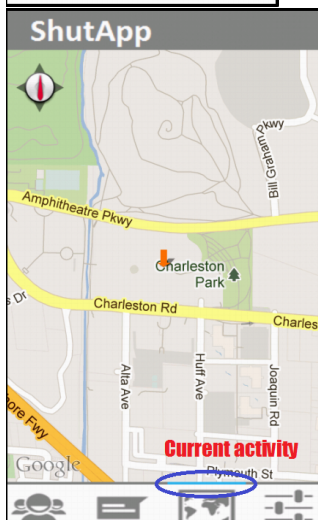

The orange arrow on the map will point towards the user's current location.

The compass at the top left corner of the map will work at a normal compass and improve the user's understanding of where he or she is currently located.

The light blue color in the navigation bar will indicate with activity that is currently displayed on the screen.

We will add some more explaining but we aren't sure how everything will work yet so this will be added later.
